Networks for Learning and Knowledge Creation in Biotechnology

Amalya Lumerman Oliver

Networks for Learning and Knowledge Creation in Biotechnology Amalya Lumerman Oliver
Scientists in the biotechnology sector have developed a vast array of products and procedures, including drugs, diagnostics, agricultural products and veterinary procedures. This is made possible through various intra- and inter-organizational collaborations between the academic and private sectors, and through the establishment of networks for learning. In *Networks for Learning and Knowledge Creation in Biotechnology*, Amalya Lumerman Oliver shows how, in many respects, the organizational structure of the industry parallels one of its most important innovations - recombinant DNA (rDNA). She shows how the concept of recombination can be used to explain a number of organizational elements, including biotechnology firms, the form of university-based spin-offs, scientific entrepreneurship, and trust and contracts in learning collaborations and networks. The result is a stimulating account of how multiple theoretical perspectives can be used to understand the structure of the biotechnology industry.
