Thirty Five Years of Automating Mathematics (Applied Logic Series)

Thirty Five Years of Automating Mathematics (Applied Logic Series)

THIRTY FIVE YEARS OF AUTOMATING MATHEMATICS: DEDICATED TO 35 YEARS OF DE BRUIJN'S AUTOMATH N. G. de Bruijn was a well established mathematician before deciding in 1967 at the age of 49 to work on a new direction related to Automating Mathematics. By then, his contributions in mathematics were numerous and extremely influential. His book on advanced asymptotic methods, North Holland 1958, was a classic and was subsequently turned into a book in the well known Dover book series. His work on combinatorics yielded influential notions and theorems of which we mention the de Bruijn-sequences of 1946 and the de Bruijn-Erdos theorem of 1948. De Bruijn's contributions to mathematics also included his work on generalized function theory, analytic number theory, optimal control, quasicrystals, the mathematical analysis of games and much more. In the 1960s de Bruijn became fascinated by the new computer technology and as a result, decided to start the new AUTOMATH project where he could check, with the help of the computer, the correctness of books of mathematics. In each area that de Bruijn approached, he shed a new light and was known for his originality and for making deep intellectual contributions. And when it came to automating mathematics, he again did it his way and introduced the highly influential AUTOMATH. In the past decade he has also been working on theories of the human brain.

From reader reviews:

Barbara Kimmel:

The book *Thirty Five Years of Automating Mathematics (Applied Logic Series)* can give more knowledge and also the precise product information about everything you want. So why must we leave the best thing like a book *Thirty Five Years of Automating Mathematics (Applied Logic Series)*? Wide variety you have a different opinion about guide. But one aim that will book can give many data for us. It is absolutely proper. Right now, try to closer with the book. Knowledge or information that you take for that, you can give for each other; you could share all of these. Book *Thirty Five Years of Automating Mathematics (Applied Logic Series)* has simple shape but the truth is know: it has great and big function for you. You can appear the enormous world by open up and read a e-book. So it is very wonderful.

Gavin Wilkins:

The reason? Because this *Thirty Five Years of Automating Mathematics (Applied Logic Series)* is an unordinary book that the inside of the guide waiting for you to snap the idea but latter it will shock you with the secret the idea inside. Reading this book next to it was fantastic author who all write the book in such awesome way makes the content inside easier to understand, entertaining method but still convey the meaning fully. So , it is good for you because of not hesitating having this nowadays or you going to regret it. This excellent book will give you a lot of advantages than the other book have got such as help improving your expertise and your critical thinking means. So , still want to delay having that book? If I were you I will go to the publication store hurriedly.

Edna Kissel:

Are you kind of busy person, only have 10 as well as 15 minute in your day time to upgrading your mind skill or thinking skill possibly analytical thinking? Then you are experiencing problem with the book when compared with can satisfy your short period of time to read it because all this time you only find publication that need more time to be examine. *Thirty Five Years of Automating Mathematics (Applied Logic Series)* can be your answer as it can be read by you who have those short time problems.

Deborah Walker:

What is your hobby? Have you heard that question when you got college students? We believe that that problem was given by teacher for their students. Many kinds of hobby, Every person has different hobby. So you know that little person including reading or as looking at become their hobby. You need to know that reading is very important in addition to book as to be the thing. Book is important thing to incorporate you knowledge, except your own personal teacher or lecturer. You find good news or update regarding something by book. Many kinds of books that can you take to be your object. One of them is this *Thirty Five Years of Automating Mathematics (Applied Logic Series)*.
